  - M3AAWG Best Practices for Managing SPF Records
    - Defining and maintaining a Sender Policy Framework (SPF) record is an important part of establishing an email sender's online identity. SPF, as defined by the IETF (Internet Engineering Task Force) standard RFC 7208 (<https://www.rfc-editor.org/rfc/rfc7208.txt>) 1, enables senders to identify servers that are authorized to send email on behalf of a domain owner.
- [M3AAWG Trust in Email Begins with Authentication](#) - The Internet's growth allows us to interact with people all over the world. Unfortunately, some of those people do not make good neighbors. Along with the effort to detect and filter the problematic traffic they generate, there is a complementary effort to identify trustworthy participants. In security technology parlance, the first seeks to identify Bad Actors, whereas the second creates ways of distinguishing Good Actors.
