

[howto, diagnose](#)

# Diagnose 101

## Memory

This will show you top 10 process that using the most memory:

```
ps aux --sort=-%mem | awk 'NR<=10{print $0}'
```

using top: when you opened top press m will short process based on memory usage.

But this will not solve your problem, in Linux everything is either file or process. so the files you opened will eating the memory too. so this will not help.

*lsdf* will give you all opened files with the size of the file or the file offset in bytes.

## Filesysteme

mit *df -h* nachschauen ob die NFS/SAMBA-remote-filesysteme eingehängt sind (wenn es lange dauert bis df Ausgabe produziert, dann stimmt an dieser Stelle etwas nicht)

```
df -h
```

```
df: /orabase/ACFS/DG1/V1/0GG: Input/output error
```

Filesystem	Size	Used	Avail	Use%	Mounted on
